

# HMS-AW & HMS-AWS Angled Supports - Introduction

HMS Angled supports are L shaped continuous angled fixing systems used for supporting brickwork walls.

These anchors come with horizontal slot holes and do not have vertical adjustability. Horizontal adjustment can be made through the slotted holes drilled at each 25 cm.

The use of these types of systems are preferred if the air layer and insulation need to be fully covered. These anchors can be fixed on concrete walls either with cast in channels, expansion bolts or chemical anchor bolts.

Available in stainless steel grade 1.4301 (AISI 304) & 1.4401 (AISI 316), they can be produced in any length up to 3 metres according to the desired application.

HMS-AW Angled Support
