

Adjustable Arm Drop-in Pin System

The drop in pin system is another technique that is can be used for stone attachments when higher pullout loads are required. And Adjsutable arm and a pin are used to be placed in side of the specially drilled holes. The holes are drilled at the edge and the rear side of the stne panels where the pins and the adjustable arms intersect, forming a strong connection.

Special Drilling for Drop in pin connection

Special drilling is done to the slabs at the upper face and at the back. The drilling must be done precisely as shown on the illustration. The adjustable arm inserted from the back of the stone meets the pin which is inserted from the edge surface of the stone.

HCA Corner Anchors

- For fixing small slabs on to supported facade slabs.
- Used for reveal, column, soffit and sill slabs.
- Slabs can be assembled in the work shop for faster installation on site.
- Special drilling is required on the slabs, details of which are shown at the bottom of the page.
